

An Evening of
SCIENCE & HOPE
for
GLUT1
Deficiency Research

Thursday, July 24, 2025

5:30-9:00 PM

DRINKS & DINNER

54 Pearl Street
New York City

Fraunces Tavern

FUELING MINDS, CHANGING LIVES

GLUT1 Deficiency is a rare, debilitating neurological disorder that deprives the brain of its most vital resource - energy. Children and adults with this condition suffer from seizures, movement disorders, speech and language difficulties, and cognitive challenges, limiting their potential and their quality of life.

Breakthroughs are within reach, and supporting research for GLUT1 Deficiency is an opportunity to have an outsized impact:

New therapeutic targets, gene therapies, and innovative drugs are on the horizon — *your support can bring them to life.*

Clinical trials that bring life-changing therapies from the lab to patients are in development — *your support can bridge the gap.*

Early screening and awareness initiatives will help end the diagnostic odyssey and years of uncertainty many families face before receiving a proper diagnosis — *your support can prevent delays and improve outcomes.*

GLUT1 Deficiency research expands into multiple fields as a prototype disease with broader implications for epilepsy, neurodevelopmental disorders, and a growing list of neurodegenerative diseases with impaired brain glucose metabolism like Alzheimer's and Parkinson's — *your support can drive exponential progress.*

You have the opportunity to support this work - a true investment in the future and a chance to fuel innovation, transform lives, and give countless families hope.
